

Placeholder file

This is NOT the book.

It is a stand-in so the M-Pesa purchase flow can be tested end to end: prompt, PIN, payment, and automatic download. If a real buyer ever receives this file, the real one was never installed.

To install the real eBook:

1. Put the PDF anywhere OUTSIDE the web root. It must never be reachable by URL - only through a paid-for download token.
2. Point EBOOK_PATH in server/.env at it.
3. Restart the server. GET /api/health will report ebookReady: true.

The delivered filename is set by EBOOK_FILENAME.
